

# EVOLUTION THRESHOLD DRAIN

## Evolution Threshold Drain, Grate Insert

The Evolution Threshold Drain by Concept Windows is designed to provide an entirely flush, seamless connection between indoor and outdoor living. The drain consists of an exterior linear drain with a custom designed, integrated sub-sill which acts as a water barrier. The sub-sill cradle under the door track will then collect and direct the moisture into the external drain. We understand how your door track looks is an important design feature, so we have created two options for you to choose from.

**Option to Change to:**  
Evolution Threshold Drain,  
Tile Insert

**CONCEPT  
WINDOWS**
